Ask the event organizer for the DDRCV ZIP and a game feed or clean recording.

GAME FEED	→	DDRCV	→	OUTPUTS
Full game screen		Read state + scores		Score display • files • optional Discord

Before setup

64-bit Windows
Internet for setup
Game capture or recording

No display or Discord?
Skip steps 4 and 6.

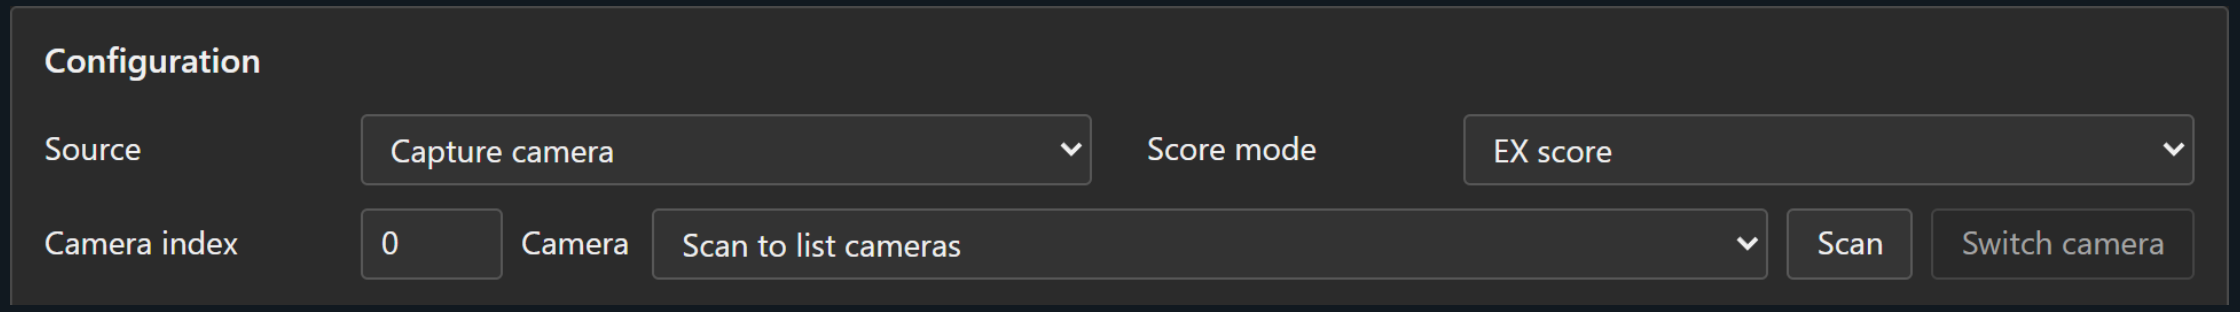

01	**Extract**	Extract the ZIP, e.g. to C:\Games\ddrcv.
02	**Set up**	Double-click setup_desktop.bat; choose 1.
03	**Wait**	Continue after “Setup complete”.
04	**Launch**	Double-click launch_desktop.vbs.

SETUP CHECK No Python needed beforehand. If setup fails, keep the error; see doc/installation.md.

Select the feed and the score mode

01 02 03 04 05 06 07 08 09 10

Status & configuration: Open… loads a supplied .json settings file; otherwise choose Source.

UI reference: stopped session; example settings.

Capture camera

Game capture device:
Scan → select its camera index.

RTSP stream

Only if given a network URL.
Paste into Stream URL.

Local video

Browse to full 16:9 footage.
If needed, tick Resize… to 720p.

EX EX event scoring.
Ask organizer if unsure.

MONEY Ordinary score to 1,000,000.
Choose Money score.

CHECK THE FEED Live feed: full 1280 × 720, without overlays. Leave Publisher settings at defaults.

Start, then verify picture, state, and scores

01 02 03 04 05 06 07 08 09 10

Click Start before the song splash—the title screen just before gameplay.

Player	Present	Accepted score	Last accepted read
Player 1	Yes	—	No accepted read
Player 2	Yes	—	No accepted read

Confirmed state

Unknown

Raw: Unknown

Waiting for capture · Publisher stopped · Processing capacity: capture stopped · Throughput: 0.0 fps · 0 frames

View stream

Snapshot on request

UI reference: stopped session; example settings.

1 Picture

View stream → Refresh frame. Check the picture and its age.

2 State

Running + Capture healthy. Confirmed state follows the game.

3 Scores

During gameplay, compare Accepted score with the machine.

EXPECTED Blank scores before gameplay are normal. Verify the final score during rehearsal.

Optional: add a score display and OBS

01 02 03 04 05 06 07 08 09 10

Skip this step if you only need DDRCV scores or local screenshots.

Stop → enter settings in the tabs → Apply configuration → Start

Score display · Renderer tab

1. **Get the display files**

   Ask organizer for ddr_score_render.
   Browse… to that folder in Renderer.

2. **Launch after Start**

   Click Launch renderer. Compare
   its scores with the machine.

3. **Show the window in OBS**

   Add a Window Capture source in OBS;
   choose the renderer window.

Scene switching · OBS tab

1. **Enable control in OBS**

   Tools → WebSocket settings.
   Copy its port and password.

2. **Enter connection + scene map**

   Same PC: localhost + OBS port/password.
   Map game screens to existing scenes.

3. **Apply → Start → Connect**

   Check scenes → Enable automation.
   Verify the actual OBS scene changes.

> MANUAL OBS — Switch scene & pause automation takes control; Enable automation resumes.

Choose what to save from the results screen

01 02 03 04 05 06 07 08 09 10

Results: tick Capture results, choose Screenshot folder, then Apply results settings.

KEEP	SCREENSHOTS ONLY	READ NAMES ON RESULTS	RESULT
Scores + names	**OFF**	**ON**	Screenshot + scores; names can update later.
Scores + P1/P2	**OFF**	**OFF**	Screenshot + scores; P1/P2 mean Player 1/2.
Screenshot only	**ON**	**Either**	Screenshot, no text. Save when results end or after 10s.

Local screenshots only?

Leave Publish results to Discord off. Files still save; skip step 6.

Immediate switches

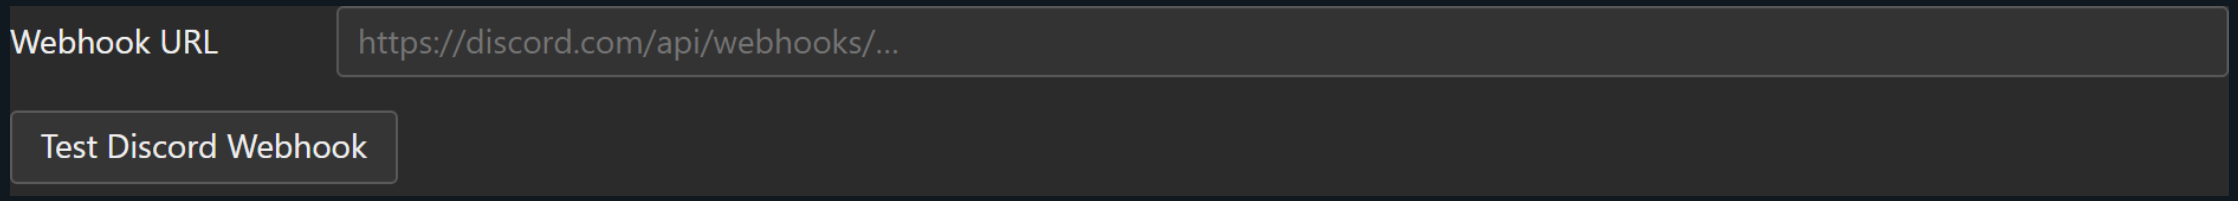

Screenshots only and Read names on results change results parsing, not gameplay scores.

> LIMIT A completely missed results screen has no automatic screenshot to recover.

Optional: send results to Discord

01 02 03 04 05 06 07 08 09 10

A webhook is a channel's posting link. Ask its administrator for the Webhook URL.

UI reference: stopped session; example settings.

1 **Paste the URL in Results**

Test Discord Webhook sends a real message. Verify the channel.

2 **Enable automatic posts**

Publish results to Discord → Apply results settings.

3 **Verify one full result**

Finish a song. Inspect its screenshot and the actual Discord post.

Expand Recent results & recovery

Saved → Send saved result

Queued / Sending / Retrying → wait.

Failed → fix error, then Retry delivery

Sent → Open Discord message

More recovery options → Republish
Creates another post.

SEND / RETRY Needs running capture, Capture results, Discord publishing, and a webhook.

Save your setup and use the right controls

01 02 03 04 05 06 07 08 09 10

A profile is a settings file. Save as… → tournament.json in DDRCV; Open… loads it.

Save / Save as…	Write the form to a profile. Running settings stay unchanged.
Start	Run with the settings currently in the form.
Apply and Restart	Apply pending edits; reset live score tracking. Use between songs.
Apply results settings	Apply only Results controls; keep gameplay scores.
Close window / Alt+F4	Capture continues. Double-click launch_desktop.vbs to reopen.
Stop / Exit application…	Stop ends capture; Exit closes the whole app. OBS stays open.

WHILE STOPPED Apply configuration prepares settings; click Start to run.

Rehearse your setup; check every session

01 02 03 04 05 06 07 08 09 10

Use the actual tournament computer, capture device, renderer, and OBS collection.

Song selection → splash → gameplay → song results → total results

Before the event

1 **Scores**

Two players, one player, full-combo ending.

2 **Recovery**

Capture reconnect; manual OBS scene and resume.

3 **Evidence**

Check the Screenshot folder and Discord post, if used.

Every session

1 **Open**

Connect hardware → launch → open the event profile.

2 **Check**

Correct device, EX/Money, and any optional connections.

3 **Start**

If already Running, check that session. Otherwise click Start.

HANDOFF TEST Save the tested setup (step 7). Verify scores, display, and scenes before the event.

Check the failing part first

01 02 03 04 05 06 07 08 09 10

Status & configuration → expand Read details & recent errors. Reset buttons are there.

No picture / stale capture	Check cable/device, 720p, and whether another app uses the camera.
Preview looks frozen	Refresh frame. This preview is a requested snapshot.
Wrong / stuck score	Check framing + EX/Money; inspect rejected-read details.
One bad accepted score	Reset P1/P2 tracking clears that live score; saved results stay.
Blank display / wrong scene	Check renderer output, OBS scene names, and automation.
Port / outbox already in use	Stop the other DDRCV session. Closing its window is not enough.

FALLBACK Unreliable results text? Enable Screenshots only; gameplay scores continue.

Hand over the profile and keep the evidence

01 02 03 04 05 06 07 08 09 10

Record these details in doc/operator_walkthrough.md, inside the DDRCV folder.

Record for the next operator

- Profile path + DDRCV folder/version
- Capture device/index + EX/Money
- Renderer folder + OBS scenes
- Screenshot folder + Discord channel
- Technical contact + manual-results procedure

End the session

1. **Inspect deliveries**
   Resolve failures or retain the queued evidence.
2. **Save intended changes**
   Save the profile; keep credentials private.
3. **Exit application…**
   Keep screenshot copies and the saved originals/history.

IN DDRCV FOLDER	screenshots/ = copies; .workbench/results/ = originals + delivery history
DETAILS	doc/operator_walkthrough.md • doc/operator_reference.md

> **REMEMBER** Saved profiles contain real credentials. Verify paths on another computer.
