DDRCV

From first install to tournament operation

Setup walkthrough + event-day reference

01 SET UP

Install and select your source

02 REHEARSE

Verify scores and integrations

03 OPERATE

Save, recover, and hand over

Desktop workflow • 18 September 2026 • Speaker notes included

What connects to what

Start with recognition. Add the integrations your event uses.

Game feed

Capture device or RTSP
Full 1280 × 720 frame

→

DDRCV

Recognize state
Read and publish scores

→

Score display

ddr_score_render → OBS

Results evidence

Local screenshots
Optional Discord delivery

FIRST MILESTONE A clean picture and accepted scores that match the machine.

Before you start

Prepare the station and the event's files.

Required

64-bit Windows + first-install internet
DDRCV ZIP / checkout
Full game feed at 1280 × 720
Or a full-frame rehearsal recording

If your event uses them

Saved event JSON profile
OBS scene collection
ddr_score_render folder + assets
Discord channel webhook

FOLDER EXAMPLE C:\Games\ddrcv — extract the ZIP completely before running setup.

Install once, then use the launcher

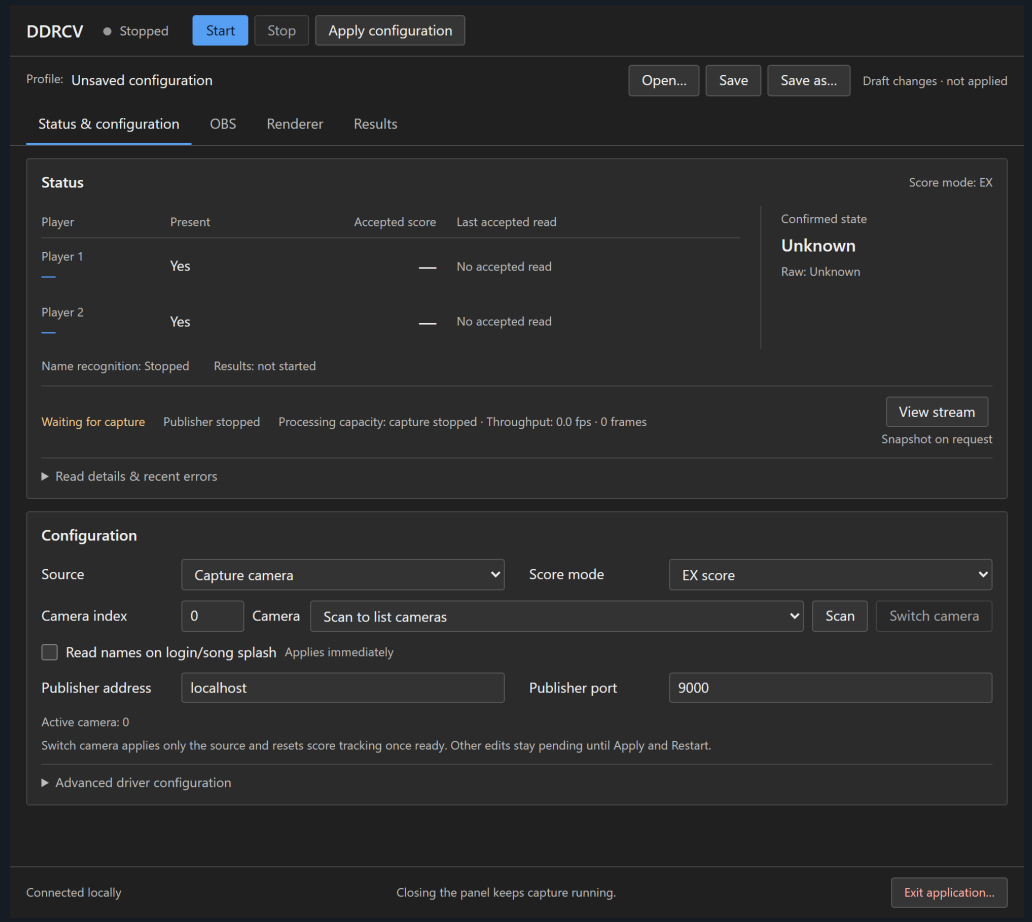

No preinstalled Python is required.

1 Extract	Open the folder containing setup_desktop.bat.
2 Run setup	Double-click setup_desktop.bat; choose option 1.
3 Wait	Leave the console open until “Setup complete”.
4 Launch	Double-click launch_desktop.vbs.

CHECK The desktop panel opens. Capture stays stopped until you click Start.

Find the four areas of the panel

Start, Stop, Apply, and profile controls remain available across tabs.

Status & configuration

Choose the feed and inspect live reads.

OBS

Connect scenes and control automation.

Renderer

Launch the separate score display.

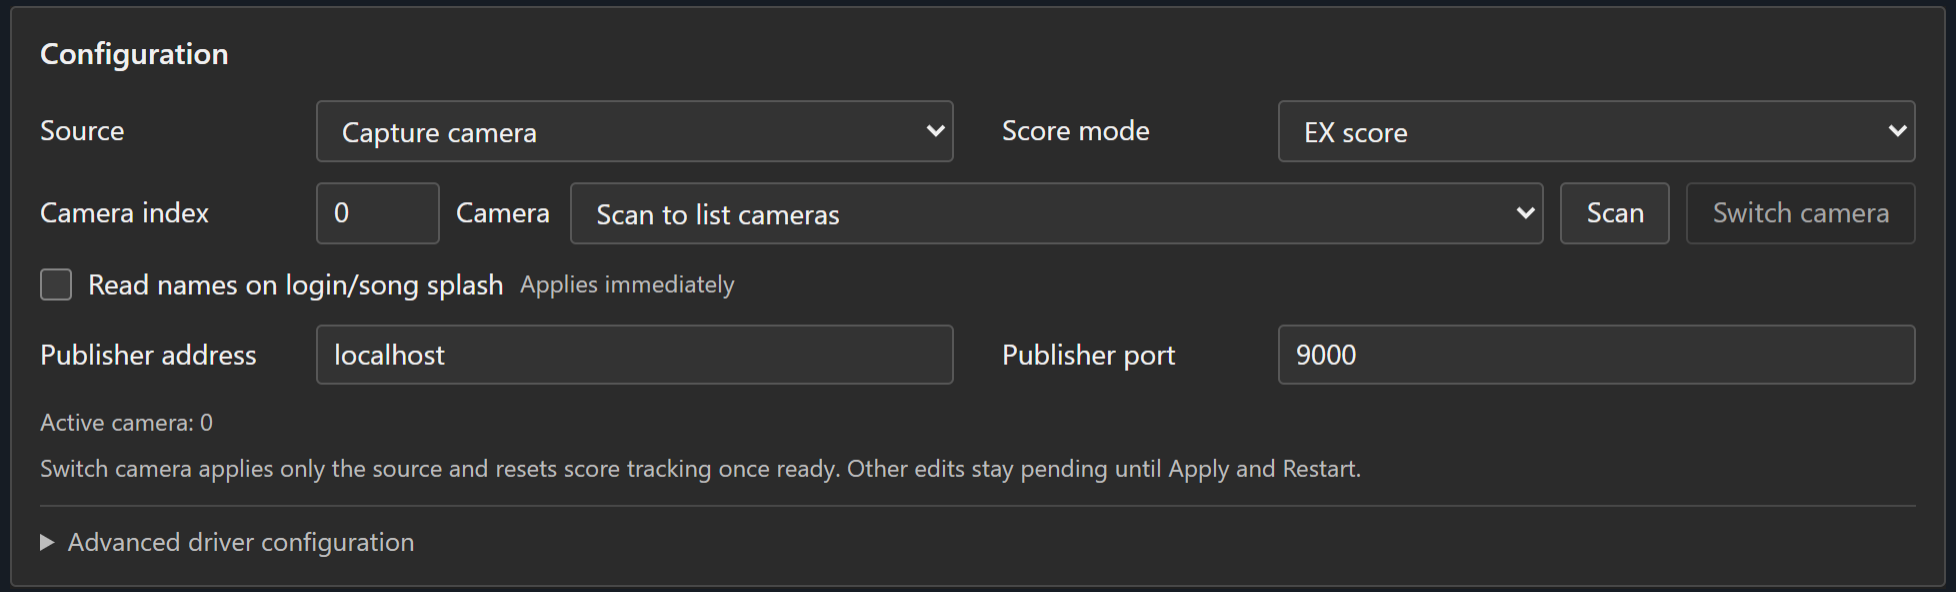

Results

Save screenshots, post, and recover.

Current app • isolated, stopped session • example paths

Choose a clean source

Status & configuration → Source

Current app • isolated, stopped session • example paths

LIVE CAMERA

Scan → select device
Check Camera index

RTSP

Enter Stream URL
Require 1280 × 720

RECORDING

Browse to Local video
Resize only full 16:9 files

Match the score mode to the game

This setting affects gameplay filtering and results interpretation.

EX score

For the event’s EX scoring.
Desktop default.
Verify with an actual song.

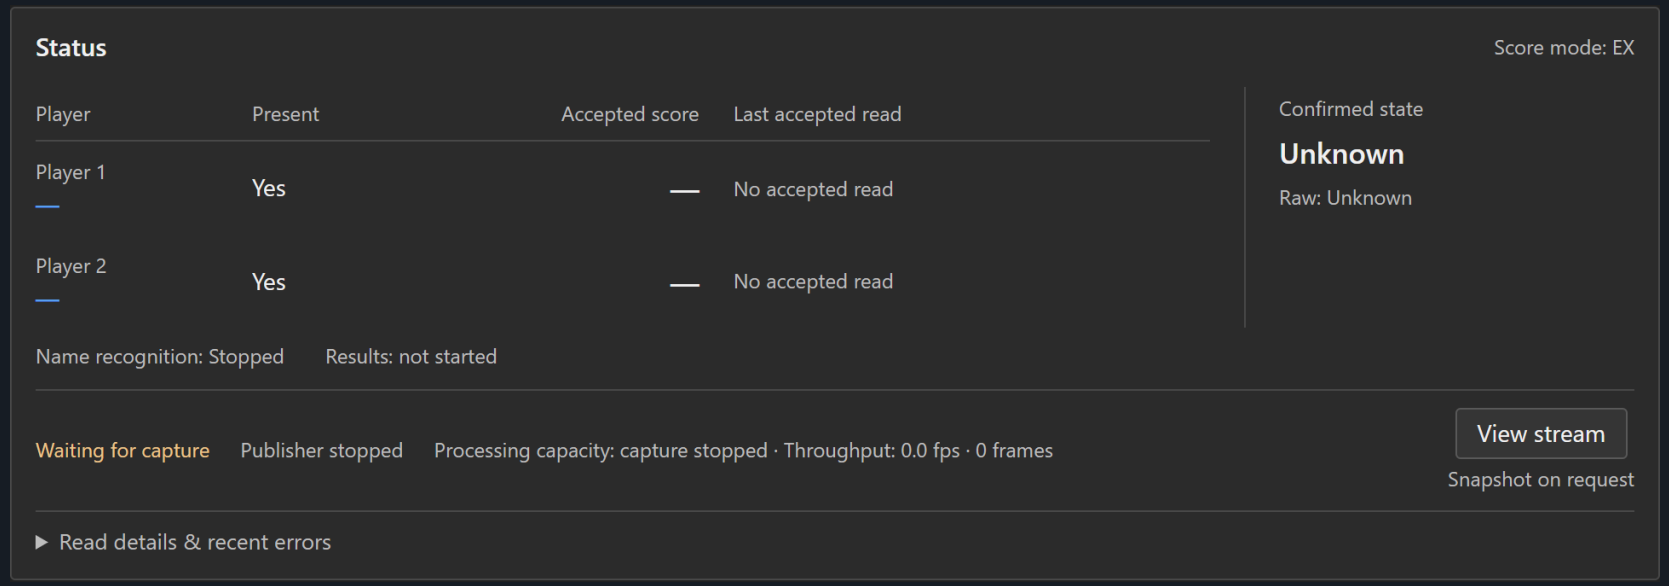

Money score

For the score toward 1,000,000.
Browser workbench default.
Verify after switching apps.

REMEMBER An old profile may select a different mode. Check before pressing Start.

Prove recognition before adding integrations

Click Start, then observe a complete song from its splash.

Current app • isolated, stopped session • example paths

1 Picture

View stream → Refresh frame.
Check full, clean framing.

2 State

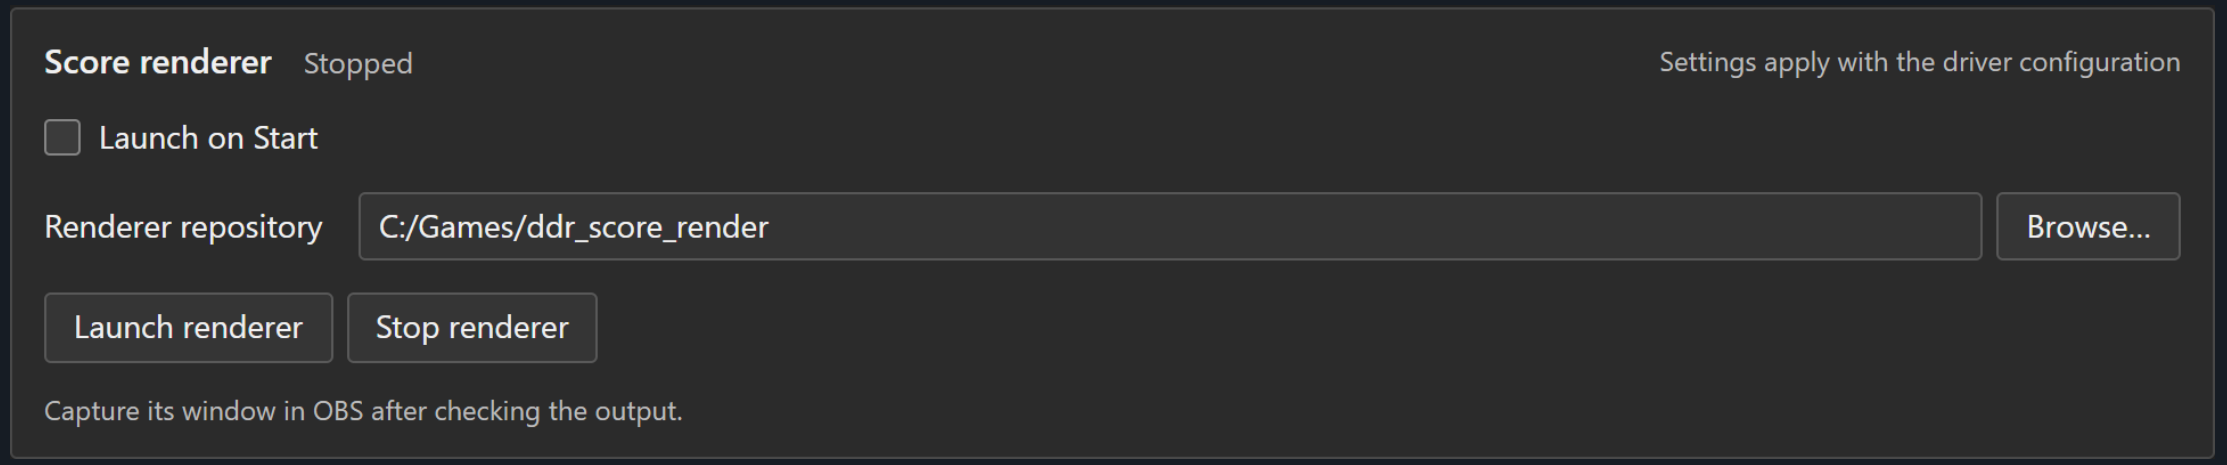

Song splash → gameplay → results.
Confirmed state follows the game.

3 Scores

Compare accepted reads and ages.
Verify the final score too.

Add the score renderer

Renderer → select repository → apply → start or launch

Current app • isolated, stopped session • example paths

Choose the folder

Separate ddr_score_render repo.

Apply the path

Then Start / Launch renderer.

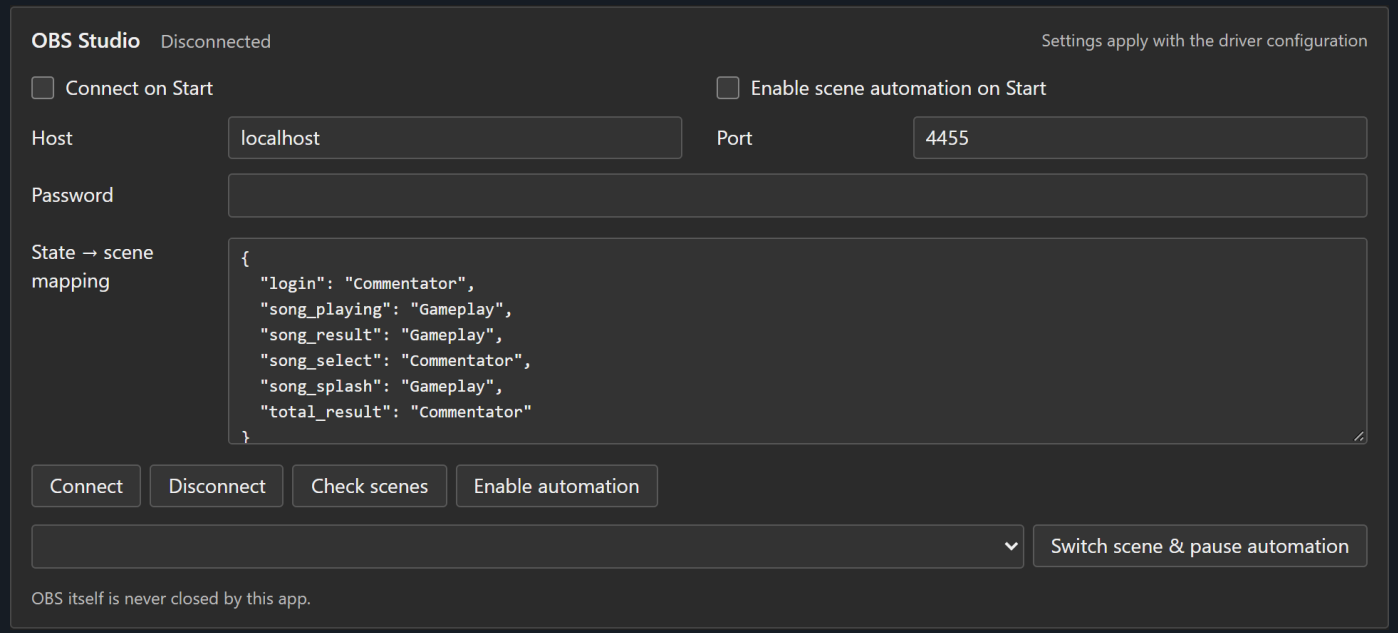

Inspect the window

Compare scores; capture in OBS.

CHECK Visible scores agree with DDRCV's accepted scores.

Connect OBS before enabling automation

Use exact scene names that already exist in the event's OBS collection.

Current app • isolated, stopped session • example paths

1 Enter connection details

Host, port, password.
Apply settings before Connect.

2 Check the mapping

Use exact scene names.
Click Check scenes.

3 Enable automation

Watch the actual OBS scene through a complete song.

Practice manual OBS control

Know how to pause automation before the event needs it.

Take manual control

Choose a scene.
Click “Switch scene & pause automation”.
Verify the scene in OBS.

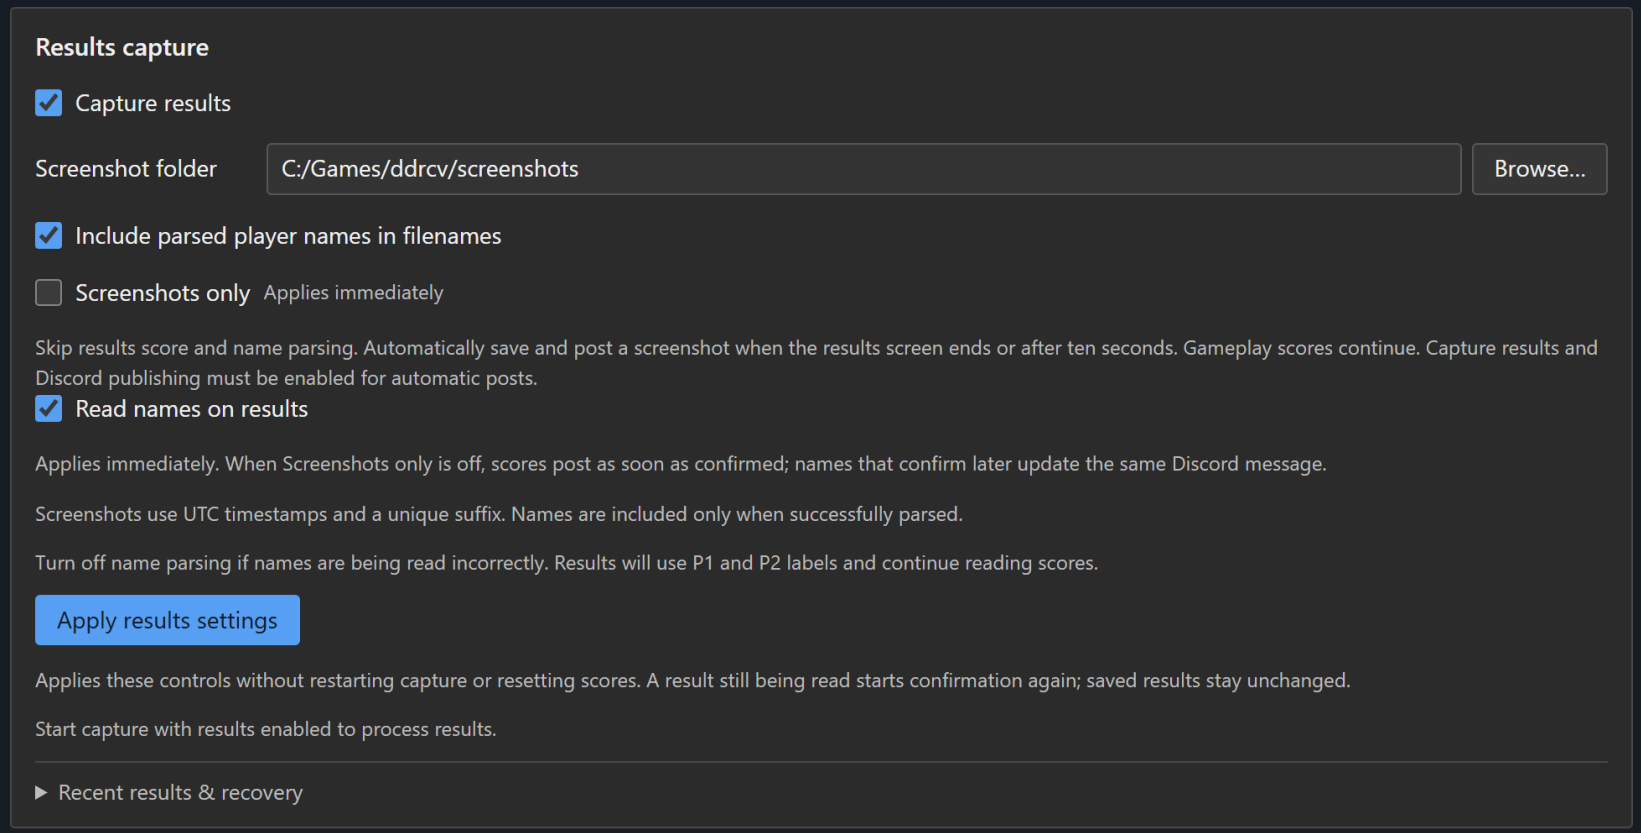

Resume automatic control

Click “Enable automation”.
Verify the scene matches the confirmed game state.

DIRECT OBS EDIT Pause DDRCV automation before changing a scene inside OBS.

Save results screenshots

Results → Capture results → Screenshot folder → Apply results settings

Current app • isolated, stopped session • example paths

Capture results

Check it even when using an existing profile.

Screenshot folder

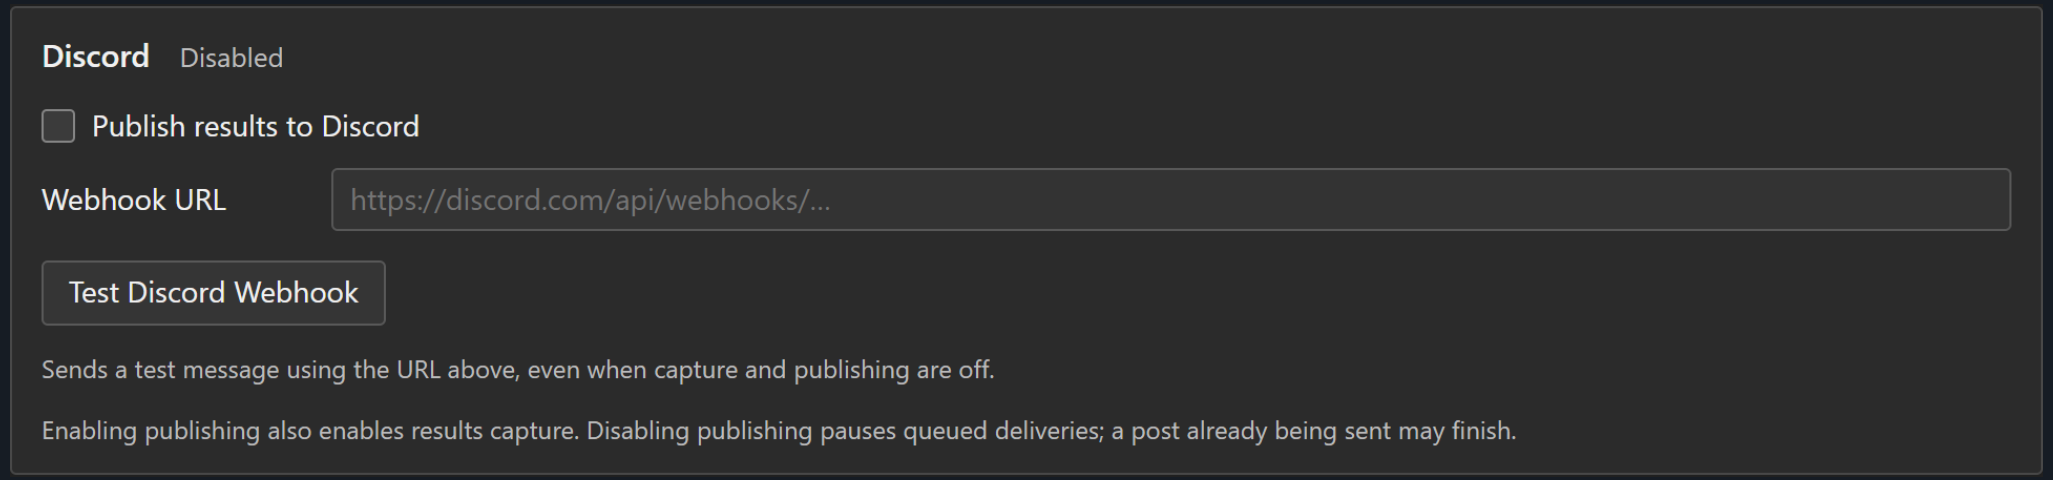

Choose a writable place you can find later.

Apply results settings

Keeps gameplay scores.

Test Discord, then enable automatic posts

A webhook test sends a real message to the selected channel.

Current app • isolated, stopped session • example paths

1 Enter + test

Webhook URL → Test Discord Webhook.

2 Verify channel

Find the actual test message.

3 Enable + apply

Publish results to Discord → Apply results settings.

Choose how much results text to read

These choices preserve live gameplay scoring.

Scores + names	Screenshots only OFF; Read names on results ON.
Scores + P1/P2	Screenshots only OFF; Read names on results OFF.
Screenshot evidence	Screenshots only ON. Save on departure or after 10 seconds.

SEPARATE CONTROL	Live-session names use “Read names on login/song splash”.

Save a profile and understand Apply

The form, running session, and saved file can contain different settings.

Save / Save as...

Write the current form to a named JSON profile.

Running settings stay as they were.

Start

Start recognition using the current form settings.

Use after opening the event profile.

Apply and Restart

Apply pending changes during a run.

Resets live score tracking.

BETWEEN SONGS Use the full Apply and Restart for source/mode/integration changes.

Finish with a real event rehearsal

Installation checks do not establish tournament readiness.

Game flow	Selection → splash → gameplay → results.
Score accuracy	Two players, one player, and a full-combo ending.
Connections	Capture reconnect; manual OBS scene and resume.
Evidence	Screenshot files, Discord post, and recovery actions.

READY WHEN Another operator can repeat startup and recovery using the saved profile.

Start the station in five steps

Keep this slide available beside the event profile.

1 Connect	Capture device ready; OBS open if used.
2 Launch	launch_desktop.vbs → Open… event profile if needed.
3 Verify	Source, EX/Money, Results, and integration settings.
4 Start	Running + healthy capture; inspect View stream.
5 Confirm	Accepted scores, actual score display, scenes, results post.

Recover a saved result

Results → Recent results & recovery

Saved	Send saved result
Queued / Sending / Retrying	Watch the status and connection.
Failed	Fix the cause → Retry delivery.
Sent	Open Discord message; Retry name update if offered.
Need another post?	More recovery options → Republish creates a duplicate.

REQUIRED	Capture running + Capture results + Discord enabled + webhook.

When something looks wrong

Check the failing part before restarting the whole session.

Frozen preview	Refresh frame; check capture age and recent errors.
Wrong or stuck score	Check framing + mode; inspect rejection details.
One bad accepted score	Read details & recent errors → Reset P1/P2 tracking.
Blank renderer	Check publisher clients, path, status, and actual window.
Wrong OBS scene	Check connection, scene names, and automation state.

Results text unreliable? Enable Screenshots only; gameplay scoring continues.

Closing the panel keeps capture running

Use Exit application… when the station should actually stop.

Close window / Alt+F4

Capture keeps running.
Reopen from the tray or launch_desktop.vbs.
Live scores remain intact.

Exit application…

Stops the application after confirmation.
OBS itself stays open.
Next launch needs Start.

BEFORE EXITING Check unresolved deliveries → save the profile → retain event evidence.

Leave the next operator a complete handoff

Fill these in for the actual tournament computer.

Station details

Profile path + DDRCV folder/version
Capture device / index + score mode
Renderer folder + OBS scenes

Evidence and support

Screenshot folder + Discord channel
