Install DDRCV and open the panel

A Windows guide from first setup to event handoff.

GAME FEED
1280 × 720

→

DDRCV
Read state + scores

→

OUTPUTS
Renderer / OBS • screenshots / Discord

Before setup

64-bit Windows
First-install internet
Full, clean game feed

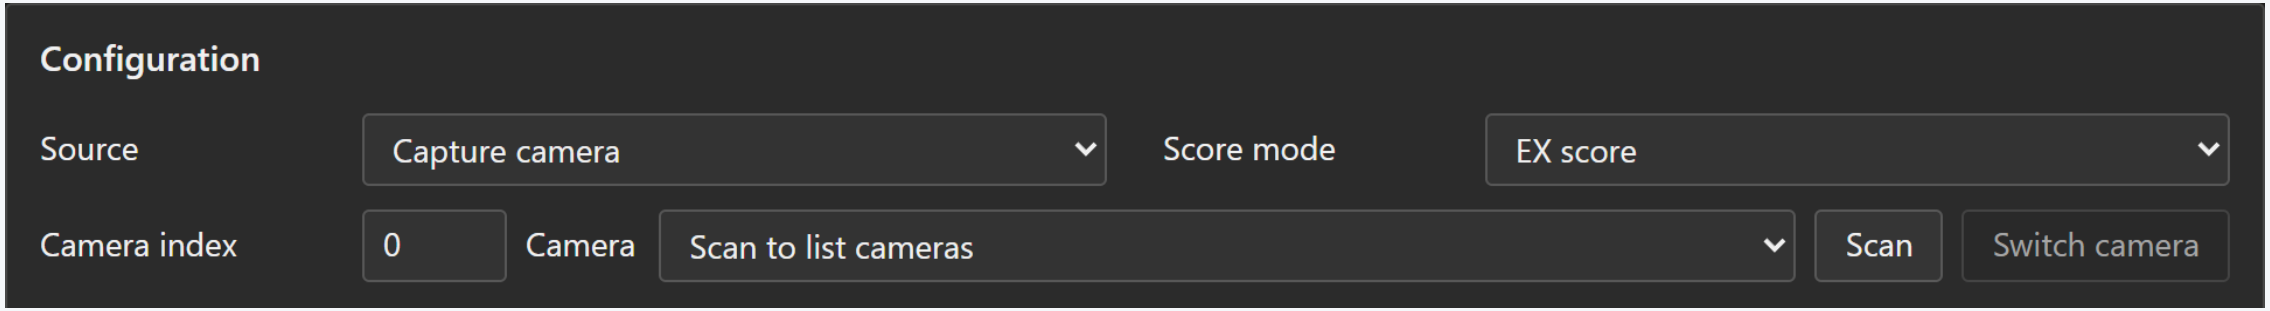

Optional: event profile, renderer, OBS, webhook.

01	**Extract**	Put DDRCV in a writable folder, e.g. C:\Games\ddrcv.
02	**Set up**	setup_desktop.bat → option 1 (local Python).
03	**Wait**	Continue after “Setup complete”.
04	**Launch**	launch_desktop.vbs → the panel opens stopped.

SETUP CHECK No Python install needed beforehand. Wait for success before launching.

Select the feed and the score mode

Status & configuration → Source and Score mode

UI reference: stopped session; example settings.

Capture camera

Scan → select device.
Verify Camera index.

RTSP stream

Enter Stream URL.
Feed must be 1280 × 720.

Local video

Browse to a recording.
Resize only full 16:9 files.

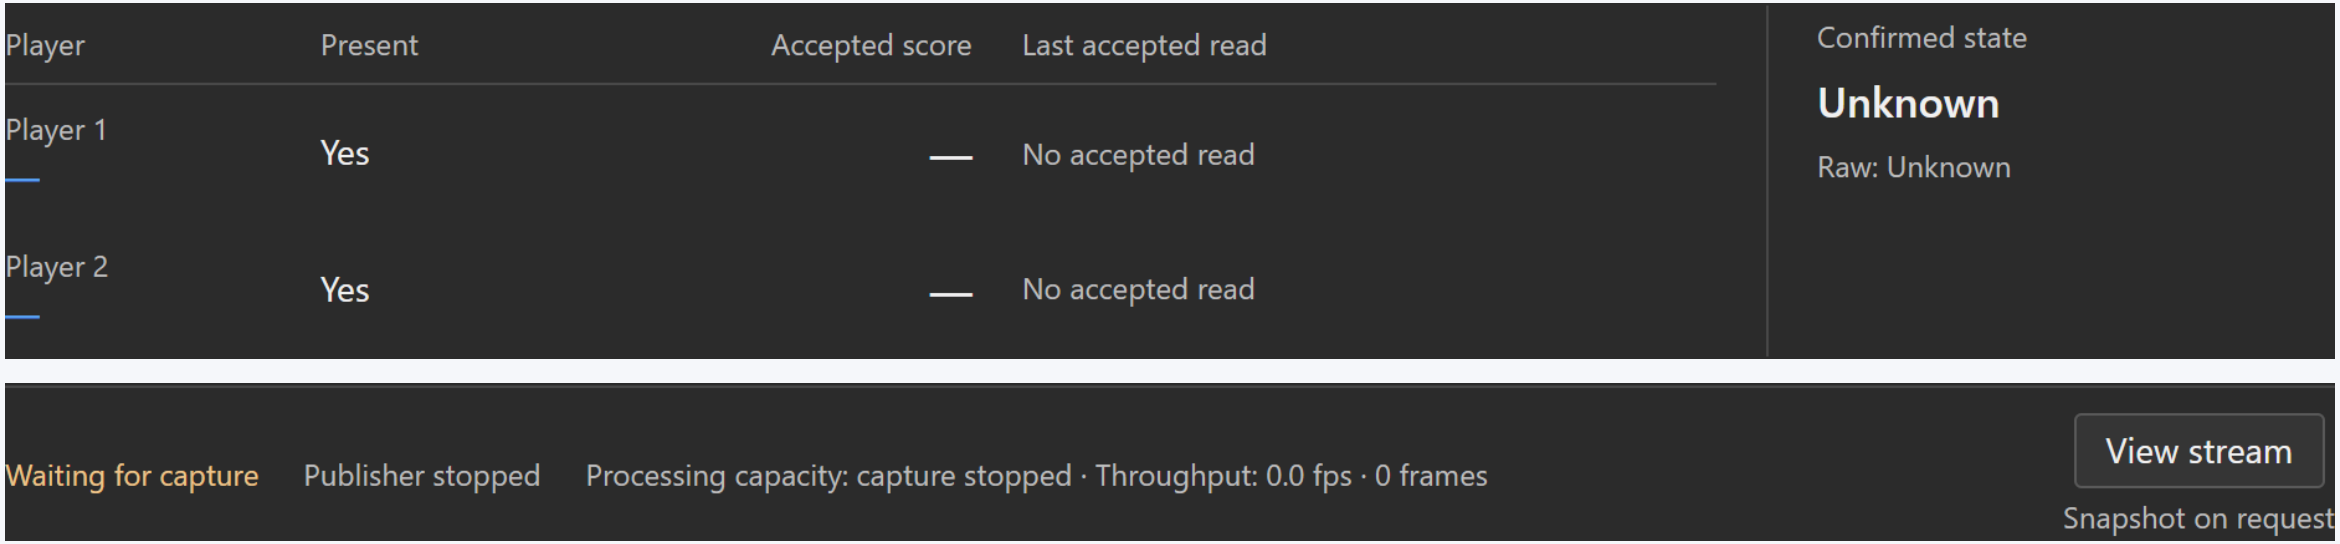

EX Event EX scoring.
Desktop default.

MONEY Score toward 1,000,000.
Workbench default.

CHECK THE FEED No borders, cropping, overlays, or stretching. Check mode on every profile.

Start, then verify picture, state, and scores

Click Start → Running. Begin before the song splash for player presence.

UI reference: stopped session; example settings.

1 Picture

Refresh frame for a new picture.
Check capture age.

2 State

Splash → gameplay → results.
Confirmed state should follow.

3 Scores

Compare with the machine.
Check last-read age.

PASS WHEN The picture is fresh and final scores agree, including a full-combo ending.

Connect the display and OBS scene control

Apply edited paths and connection settings before using their buttons.

Score display

Renderer tab

1. **Select the repository**

   Browse to the separate ddr_score_render folder.

2. **Apply, then launch**

   Start, or use Launch renderer after capture starts.

3. **Check the actual window**

   Compare scores, then capture that window in OBS.

Scene control

OBS tab

1. **Connect and validate**

   Enable OBS WebSocket. Enter host/port/password; Apply → Connect.

2. **Map existing scenes**

   Use exact scene names → Check scenes → Enable automation.

3. **Practice manual control**

   Switch scene & pause automation. Enable automation resumes.

LIVE CHECK Watch the renderer and OBS themselves; “connected” alone is not proof.

Choose the results evidence you need

Results → Capture results ON → choose a writable Screenshot folder

KEEP	SCREENSHOTS ONLY	READ NAMES	RESULT
Scores + names	**OFF**	**ON**	Scores first; names can update later.
Scores + P1/P2	**OFF**	**OFF**	Keep scores without player-name parsing.
Screenshot only	**ON**	**Either**	Save on results departure or after 10 seconds.

Apply results settings

Applies Results controls without resetting gameplay scores.

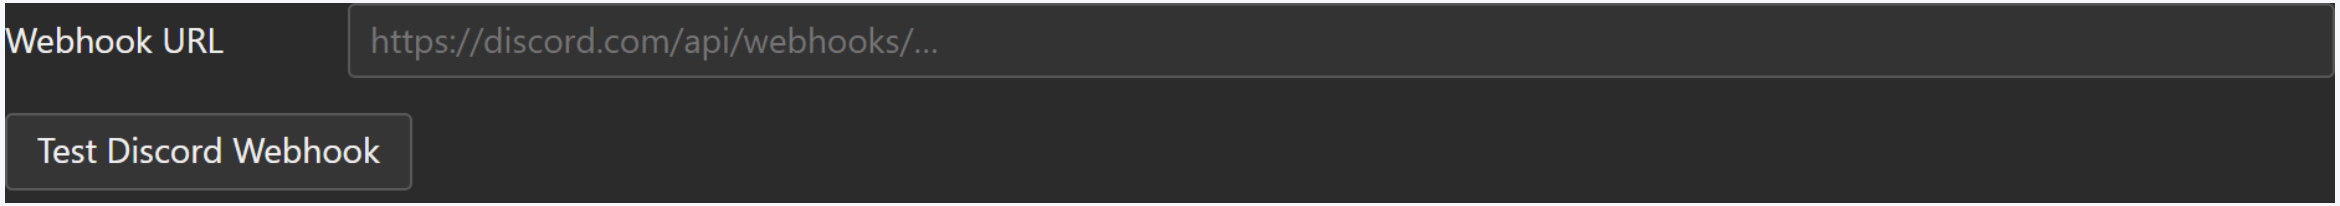

Immediate switches

Screenshots only and Read names on results apply as you toggle them.

LIMIT A completely missed results screen has no automatic screenshot to recover.

Verify the destination, then publish

Results → Webhook URL. A webhook test sends a real message.

UI reference: stopped session; example settings.

1 Test the webhook

Click Test Discord Webhook; inspect the channel.

2 Enable automatic posts

Publish results to Discord → Apply results settings.

3 Verify one result

Complete a song; inspect the screenshot and Discord post.

Recent results & recovery

Saved	Send saved result
Pending	Wait; check connectivity.
Failed	Fix → Retry delivery.
Sent	Open Discord message.
Republish	Creates another post.

SEND / RETRY Needs running capture, Capture results, Discord publishing, and a webhook.

Know what applies, resets, or keeps running

The form, running session, and saved profile can contain different settings.

Save / Save as…	Write the form to a profile. Running settings stay unchanged.
Start	Run with the settings currently in the form.
Apply and Restart	Apply pending edits; reset live score tracking. Use between songs.
Apply results settings	Apply only Results controls; keep gameplay scores.
Close window / Alt+F4	Capture continues. Reopen from the tray or launcher.
Stop / Exit application…	Stop capture. Exit also closes the backend; OBS stays open.

WHILE STOPPED Apply configuration prepares settings; click Start to run.

Rehearse once; repeat the startup checks

Use the actual tournament computer, capture device, renderer, and OBS collection.

Song selection → splash → gameplay → song results → total results

Before the event

1. **Scores**

   Two players, one player, full-combo ending.

2. **Recovery**

   Capture reconnect; manual OBS scene and resume.

3. **Evidence**

   Verify screenshot files and the actual Discord post.

Every session

1. **Open**

   Connect hardware → launch → open the event profile.

2. **Check**

   Source/index, EX/Money, and integrations.

3. **Start**

   Check capture freshness, accepted scores, display, and scenes.

HANDOFF TEST Another operator can start the station and recover a saved result unaided.

Check the failing part first

Read details & recent errors explains rejected reads and recent failures.

No picture / stale capture	Check cable, index/URL, 720p, and capture-device ownership.
Preview looks frozen	Refresh frame. This preview is a requested snapshot.
Wrong / stuck score	Check framing + EX/Money; inspect rejected-read details.
One bad accepted score	Reset P1/P2 tracking clears that live score. Saved results stay.
Blank display / wrong scene	Check renderer output, OBS scene names, and automation.
Port / outbox already in use	Stop the other app/workbench/CLI; it may still be running.

FALLBACK Unreliable results text? Enable Screenshots only; gameplay scores continue.

Leave a usable profile and an evidence trail

Fill the event setup table in the written walkthrough before handing over.

Record for the next operator

- Profile path + DDRCV folder/version
- Capture device/index + EX/Money
- Renderer folder + OBS scenes
- Screenshot folder + Discord channel
- Technical contact + manual-results procedure

End the session

1. **Inspect deliveries**
   Resolve failures or retain the queued evidence.
2. **Save intended changes**
   Save the profile; keep credentials private.
3. **Exit application…**
   Keep screenshots and the Results outbox.

EVIDENCE	screenshots/ + .workbench/results/ (defaults)
DETAILS	doc/operator_walkthrough.md • doc/operator_reference.md

> **REMEMBER** Saved profiles contain real credentials. Verify paths on another computer.
